Ingest Data | Pub/Sub
Process Data | Dataflow stream - batch
OLAP Analytics | Bigquery → to gain insights < User behaviour, content consum pattern
OLTP Transactn | cloudsql - Limited scalability
Data Warehouse (unified view for analytics & ML)

Implement pipelines for safe releases → CICD: Cloud Build, Cloud Deploy } managed service
Cloud Run

Internet Access to Private resources → Cloud NAT (only egress internet, no inbound exposure)

Bigquery → Serverless Autoscales SQL interface ← Bigquery Loganalytics

Natural Lang Interaction 24/7 support → Conversational Agents (Dialogflow) → create virtual agents

Summarization from media content
- Generic summary → Natural Lang API
- Domain specific summary → Vertex AI (Build uroun model)

Extract Rich metadata from media assets using NLP & Computer Vision → Video AI, Vision AI, Natural Lang AI (enrich content from text)
I/p: video, Image, text
Product Catalog

Customer Interaction Data Analyzing to help in decision making
identify trends, extract insights ← Pretrained models for content extraction

Conversational Insights
raw data is visualized using
Looker Studio → dashboards reports

AI powered detection for harmful content → model Training, Tuning Vertex AI

Decisions of AI model → explained → Vertex Explainable AI

Conversational (AI) Agents for personalized experience & content virality
call center work → Chatbots building → to provide personalized assistance with Natural Lang understanding

Enhance Search Relevance — Personalized search's → Vertex AI Search } Product Discovery

Supplier Data → extract relevant attributes → Document AI

customization in Image Generation like bg, color, text etc → Vertex AI model

Vertex AI → to develop UI for content review for associates to ✓allow ✗reject modify

Imagen Model is used for image generation & editing tasks

Security Command Center, Assured Workloads, Sensitive Data Protection
- scan workenv for threats
- enforce compliance controls
- automatically discover, identify, classify sensitive data from SQL, GCE, GKE

→ modernize the in vehicle experience, autonomous vehicle dev

SDWAN/Router Appliances → rural areas connectivity.

Leverage Google Threat Intelligence
Mandiant consulting service
Mandiant Incident Response Services. } Security & Risk Management

Dealer & Customer self service → Conversational Agents
Step by step Guidance → Agent Assist
Analyze the interaction data → Conversational Insights.

Static content (immutable) ideal for caching cloud storage + CDN

Cloud Armor → WAAP Web App API protection: against DDoS attacks.

Apigee → Proxy layer.
AI safety with model Armor & Apigee → proxy for GenAI Agents → Gateway b/w LLM Appⁿ & models

IAP Identity Aware Proxy → verify user Authorization Policies @ App level (https)
both on cloud & on prem appⁿ.
Implement zero trust access model
uses context like IP, user activity → to approve / reject Acces.

Cloud Asset Inventory → GC's metadata inventory service.
view search export monitor analyse → asset metadata
Filter by location, time → metadata Discovery
Identify over public exposured APIs → to reduce attacks.
Audit trails, Debugging & Compliance → Reports on resource changes.

IAC: Deployment Manager, Terraform (Infra Automation Framework) → reduce OpEx → faster deployments, reduces human errors.

Guaranteed RPO & RTO → Cross Region Replication
→ Daily snapshots ✗

Cloud Run has native traffic splitting b/w Revisions
Built in canary development
new version of app deployed creates
90% old revision → continues to exist.
10% new revision

Database Migration Service fully managed serverless, Minimal Downtime, SSL encryption
onprem / other cloud database / self hosted.
Req: Transactions must remain online during migration with minimal downtime.

Cloud Endpoints
Internal API (small teams)
Cloud native
No analytics
✗
✗
Limited Policy (Lightweight)
Lightweight cheap
← Basic Proxy
OPENAPI
gRpc spec Support

API Gateway
Medium
External
Cloud Native
Basic analytics
✗
✗
Basic

Apigee
External partners
Large enterprises
Cloud + Hybrid (Onprem)
Advanced Analytics / Detailed Analytics
API Monetization
SLA's
Dev Portal
Very Rich (OAuth2, threat protection, quotas, routing, rate limiting)
Heavy & Expensive
Basic Proxy + Extra logic
Governance + Policy management.

Bigquery (Partitioned tables to save cost)
clustered table for query efficiency.

ZTA Identity First Network later.
